Summary — Senior Software Engineer building large-scale AI infrastructure platforms that drive frontier LLM training and inference.

Skills

Programming TypeScript, Node.js, Express.js, Java, Rust
Devops Terraform, Azure Devops, Docker, Gradle
Cloud Microsoft Azure, AWS, OCI

Databases CosmosDB, Redis, PostgreSQL
Testing Jest, Mocha, Grafana k6, JUnit
Observability Azure App Insights, New Relic, Splunk

Experience

SpaceXAI - Memphis, TN, USA

June 2026 – present

Legal Entity: CTC Property LLC (SpaceX)

Senior Software Engineer

- Designed and built a cloud billing portal to track AI compute usage, billing, and lost-GPU-hour credits for tenants running large-scale LLM training workloads under multi-billion-dollar contracts at Colossus.
- Built fleet observability and alerting platforms for Colossus, the world's largest AI supercomputer, across H100/H200 and GB200/GB300 NVL72 systems, reducing GPU downtime by 3% and improving availability for LLM training workloads.
- Built a rack repair-tracking platform that correlates related failures to identify shared root causes, improve repair ownership, and reduce MTTR by 5%, returning GPU capacity to LLM training workloads faster.
- Performed on-call duties for Colossus, coordinating incident response across power, cooling, compute, network, and storage teams to restore GPU capacity and minimize disruption to large-scale LLM training.

Oracle - Nashville, TN, USA

December 2025 – April 2026

Senior Member of Technical Staff

- Owned end-to-end development of AI-enabled platform for monitoring, alerting, and automated recovery across 40,000+ devices in two **AI data center** buildings within **Oracle Cloud Infrastructure**—including GPUs, cameras, network devices, and servers—reducing mean time to repair by 15% and lowering power and cooling costs by 10%.

Starbucks - Baltimore, MD, USA

December 2021 – May 2025

Software Engineer

- Led end-to-end development of a mission-critical notification-as-a-service platform, streamlining real-time operational alerts to 10,000+ North American stores and roasting plants - improving responsiveness and operational efficiency by 15%.
- Built RESTful APIs and GraphQL queries enabling 10,000+ store managers to access sales data, customer transaction counts, and customer connection scores for informed decision making.
- Developed ticketing features used by 70,000+ employees, reducing support call volume by 20%.
- Engineered cloud-native distributed systems using Azure Functions, EventHubs, ServiceBus, AzureCosmosDB, and dockerized web applications.
- Automated CI/CD deployment pipelines with Azure DevOps, managed infrastructure using Terraform, and implemented traceability features - resulting in reliable and auditable software releases to production.
- Led design reviews and code reviews to promote engineering excellence across teams.

Mariner Finance - Baltimore, MD, USA

September 2019 – November 2021

Software Engineer

- Developed core features to integrate with Equifax/TransUnion and process credit reports - essential to generate loan offers for millions of applicants.
- Designed and implemented API integrations with major financial affiliates (LendingTree, Credit Karma) that account for 40% of the total loan volume.
- Developed Autopay features that reduced late payment by 10%.
- Developed features and cron jobs to track the performance of marketing campaigns, providing actionable insights to marketing teams.
- Automated the ID verification process saving one minute per application for the online support staff.
- Developed APIs for document upload, password recovery, and loan applications, enabling 500,000+ customers to register and apply.

Education

George Mason University - Fairfax, VA, USA

August 2017 – May 2019

Master of Science in Computer Science

Savitribai Phule Pune University - Pune, MH, India

August 2012 – May 2016

Bachelor of Engineering in Computer
